

***BiotaP LLC focuses on development and production of high throughput test systems to analyze various microbioms. This new approach provides a low human resource demanding technique for description and analysis of any microorganism community including:***

- ***soil***
- ***pure and wastewater***
- ***medical specimens like samples from lungs, intestine, uterus, etc***
- ***indoor and outdoor air***
- ***food and animal feed***
- ***biosolids (sludge, manure)***
- ***etc.***

***BiotaP offers also high throughput DNA sequencing service.***

***Exponentially increasing growth of interest from both the industry and scientific community sides for metagenomic environmental monitoring resulted in founding a BiotaP LLC in Estonia at 2007.***

***Today BiotaP runs a modern fully equipped testing laboratory in Tallinn with highly skilled personnel.***

### ***Why BiotaP and metagenomic approach?***

- ***More precise quantitative and qualitative environmental analysis***
- ***Reduction of test-time and complexity (easier to use)***
- ***Cost saving***
- ***No need for extra trained staff (easy sampling following instructions + conventional PCR (Polymerase Chain Reaction) testing know-how needed)***
- ***Standardization – everywhere comparable results***

***BiotaP is always open to new co-operation partners and clients worldwide in order to explore together the society of micro-organisms.***
